

# Junior

## Practical Test

### ReactJs + NextJs

#### Description

Create a flexible web application to present quick content advertising by drag and drop components to build page sites

- The ecosystem has 2 sites / pages: Admin to manage and Consumer to present
- API and data of your choices to show demonstrations

#### Admin

- Builder: to Drag and Drop components (2 components: Paragraph and Button).
- Admin can change Paragraph's text and Button's label, alert message.

#### Consumer

- Display the pages that are built by the **Admin** site (View Only Mode). User click on the button and show an alert with the message set by **Admin**.

#### Assessment

- Screenshots of your result
- It should show your pride as one of your creations. What did you apply to make it the best? (Architecture, Principle, Design Pattern, Test, etc.)

- As the sole architect, developer, designer of this system, you should have a simple document of how to setup and run i.e. README file
- **You can (and should) plan out an estimation and send to us if possible.**

## Optional

- Text edit inline directly on component.
- More some components like: Image Upload, Text Editor, etc...
- Ability to undo and redo
- Export and import the page to save and load later.
